**FCC Registration and Industry Canada Certification of the MIYN46**  
**FCC Identifier: W9N-MIYN46**  
**IC Identifier: 8284A-MIYN46**

Dear Sirs,

With this letter we confirm the following:

1. The duration of a manually activated alarm transmission from the MIYN46 is 3 seconds.
2. The MIYN46 Wall Transmitter with two relays sends an automatic radio daily message of 1.7 seconds duration to the receiver through radio monitoring. Also, low battery supervision is supplied to the micro-controller. A battery low transmission is sent to the receiver when this is the case, instead of the automatic daily message.
3. The repeat function of transmissions for alarms and error messages is deactivated by default factory setting. All instructions related to the activation of this function have been removed from the manual. This ensures that the customer/installer cannot turn this feature on.

Best regards,

TeleAlarm SA
