**FCC Registration and Industry Canada Certification of  
MIYS35 Transmitters  
FCC Identifier: W9N-MIYS35  
IC Identifier: 8284A-MIYS35**

Dear Sirs,

With this letter we want to confirm that there is only a minor difference between our products named "MIYS35 Pendant Transmitter with reset possibility" and "MIYS35 Pendant Transmitter without string".

The first one feature a reed contact "SW1" and an additional LED indicator "D1" with its resistor "R5" that are not assembled on the second variant. As these components are not part of the RF-circuitry that is identical on both products, we assume that these products do show same RF characteristics and therefore can be included in the same evaluation of conformity and certification process.

Therefore we ask you to perform the needed evaluation of conformity on the product "MIYS35 Pendant Transmitter with reset possibility" and consider the variant "MIYS35 Pendant Transmitter without string" as part of the same certification.

Best regards,

TeleAlarm SA
